

Fogging Machine

Generation 2 Electro Static

Product Code:
GA-GN2FOG

This generation 2 Electrostatic Fogging Machine is user friendly, and designed to efficiently eliminate bacteria, germs and viruses. Electrostatic spraying is a method of applying a very thorough even coating, of disinfectant or sanitiser. When sprayed through the device, an electric charge is applied to a solution to create a 3-D wrapping effect.

Because the particles in the spray are positively charged, it allows the appropriate disinfectants to wrap around and evenly coat all types of surfaces for complete coverage. This allows for quick and effective disinfecting of internal spaces such as offices, hotels, classrooms, gyms and shopping centres.

- Upgraded motor, making it even more powerful than Generation 1
- 5 litre capacity - 5 litres roughly covers approx. 10,000 square feet.
- Supplied with a 2-pin plug and a high-quality UK 3-pin plug adaptor
- Portable and lightweight design
- Includes a rubber strap for extra comfort
- Efficiently disinfects internal spaces and enclosed outdoor areas
- Eliminates germs, viruses and harmful bacteria
- Easy to carry so that multiple areas/surfaces can be covered quickly
- Spray nozzle has a well-distributed fan to make the fog with uniform distribution
- Waterproof and dust-proof
- Adjustable angle
- Strong driving force
- Fitted with a switch to easily adjust the flow to match with different applications
- Rated Power: 1200W

Dimensions: 32 x 22 x 43cm. Net weight 3.2kg

Spray range 8m.
