

Complete Certified Sanitization System

Sanitize

HOSPITALITY

Hotel staff face many challenges every day. It's been researched that 81% of surfaces have bacteria on and that includes light switches, remote controls, bathroom sinks and toilets.

EDUCATIONAL AREAS

With hundreds of runny noses and sticky fingers in close contact with each other, it can be difficult to avoid germs in schools. Research states that students come in contact with about 152,300 germs while at school. Keeping classrooms germ-free is a constant task for teachers.

GYM & FITNESS CENTRES

Gyms & Fitness centres are hotbeds of germ activity. Germs can survive for a month on the surface of equipment. Fungi multiply in damp and wet areas. Bacteria that can lead to dangerous skin infections, are found on all hard and soft surfaces.

TRANSPORT SECTOR

Sneezing, coughing, talking or breathing produces large numbers of germs that expose nearby passengers. Commonly touched surfaces may be contaminated and bacteria and virus from these surfaces can be transferred to hands and then into the body via the eyes, nose and mouth.

Fully certified sanitization aerosol solutions. Whatever the application, ProXL Sanitize has it covered. Certified to BS EN 1276, 1650 & 14476..

AIR CONDITIONING / FILTRATION

Air conditioners are places for bacteria to proliferate. As air is pulled over the coils in an air conditioner, condensation is produced. This moisture can create an ideal environment for bacteria to grow if not cleaned regularly.

MEDICAL INSTITUTES

One of the greatest challenges for any hospital or practice is to minimise cross-contamination from patients suffering with colds or flu, spreading germs around your waiting rooms.

RESIDENTIAL SALE & RENTAL

Millions of germs are spread by humans and pets. How hygienic were those last tenants? Did they have pets that were left to roam around the property? Without correct sanitization, these bacteria could affect someone else and continue the spread..
